Chapter I: Introduction

PURPOSE OF REPORT

Vermont is reviewing its child support guidelines as required by federal regulation.¹ Vermont Child Support Guidelines are prescribed in state statute (15 V.S.A §654) and set by administrative rule.² The guidelines are available to all persons responsible for determining child support awards in Vermont. The guidelines consist of numerous tables and worksheets that consider the economic cost of raising children and standardized tax formulas and tax assumptions for converting each parent's gross income to income available for child support. The guidelines-determined amount is to be considered the amount of the child support obligation unless the court finds that the amount would be unjust or inappropriate.

Federal regulation requires that a state's guidelines review consider economic data on the cost of raising children and examine case file data to analyze the application and deviation from the guidelines. Vermont statute requires that guidelines be amended not less than once every four years. This report reviews current economic data on the cost of raising children and other economic data (*e.g.*, price levels and tax rates) used to develop the tables that form the basis of the Vermont Child Support Guidelines.

Child support income is an important source of income to many families. National data from 2011 reveals that average child support receipts consisted of 52 percent of the average income of impoverished custodial families receiving child support and 16 percent of average income of all custodial families regardless of their poverty status.³ The 2013 U.S. Census American Community Survey found that there were 124,130 children living in Vermont and the 2010 U.S. Census Survey found that 31 percent of Vermont children lived with a male or female householder with no spouse present.⁴ These children are likely to be eligible for child support. The total number of children eligible for child support could be even larger if the count included children who are living with married parents but one parent is a step-parent, in foster care, and other situations in which the children are not living with both parents. In 2013, the State of Vermont Office of Child Support (OCS) served almost 19,000 cases and collected and distributed about \$45 million in child support.⁵ An unknown amount of additional support is paid to non-OCS cases.

OVERVIEW AND BASIS OF VERMONT CHILD SUPPORT GUIDELINES

The policy assumptions underlying the Vermont Child Support Guidelines are prescribed in state statute and summarized in the *Child Support Guidelines* published by OCS.⁶ Like the majority of states, Vermont relies on the Income-Shares guidelines model, which presumes that both parents contribute to the financial support of the child; hence, both parents' incomes are used to determine the amount of the support obligation. (More information about guidelines model is provided at the end of the section.)

The OCS publishes a packet with its *Child Support Guidelines* that includes the worksheets and tables necessary to calculate a support obligation for three different custody arrangements: 1) sole custody, 2) split custody, and 3) shared custody. There are three major tables:

- Tax Conversion Table for Sole and Split Custody Cases;
- Tax Conversion Table for Shared Custody Cases; and the
- Table of Intact Family Expenditures (Guideline Table).

Excerpts of them are shown to the right.

Calculating the guidelines amount requires several steps and these tables. The first step involves disclosure of each parent's gross income. In the second step, each parent's gross income is converted to income available for child support using a tax conversion table. For example, if there is sole custody and each parent's gross income is \$324.99 per month, the after tax income for a custodial parent with one child would be \$420 per month and the after tax income for a noncustodial parent would be \$308 per month. The tax conversion is based on a standardized tax formula that considers both federal and state taxes including the federal and state earned income tax credits. It assumes, as required by statute, that each parent claims himself or herself as an exemption, the custodial parent in sole custody cases also claims the number of children for whom support is being determined, and parents in

shared custody cases split the exemptions for the number of children for whom support is being determined.

Besides the standardized adjustments for taxes, there are other income adjustments permissible under the guidelines (*e.g.*, deduction for payment of another child support order). Once each parent's income available for support is determined, the parents' incomes are added to produce a combined family income. Continuing with the example above, if there are no other income adjustments, the combined family income is \$728 per month. The custodial parent's prorated share is 58 percent and the noncustodial parent's prorated share is 42 percent.

In the fourth step, the combined family is applied to the Guideline Table to determine the amount that a family of that income and size typically spends on children if they lived together and shared financial resources. The amount from this table is the basic support obligation. So for a combined family income of \$728 per month and one child, the amount would be \$165 per month. It does not include childcare expenses and the extraordinary medical expenses of the child. The actual amount expended on childcare and the child's healthcare in a particular case is considered in the guidelines calculation on a case by case basis and added to the basic support obligation to develop a parental support obligation. Each parent is responsible for his or her prorated share of parental support obligation. In sole custody cases, the noncustodial parent's prorated share becomes the basis of the support award although there may be other considerations as provided in the guidelines such as the noncustodial parent's ability to pay. Continuing with the earlier example, the noncustodial parent's share is 42 percent of \$165, which is \$69 per month. In other custody situations there are additional adjustments to account for the child's time with each parent or the number of children living with each parent.

The tax conversion tables and the Guideline Table were last revised January 2, 2012 and reflect the most current economic data available in 2011. This includes economic data on the cost of child rearing, price levels, and federal and state tax rates and FICA.

FEDERAL REQUIREMENTS

Federal law has required state advisory child support guidelines since 1987. The Family Support Act of 1988 expanded the requirement. As of 1989, each state must have one set of guidelines that are to be applied presumptively rather than on an advisory basis. It also requires each state to establish deviation criteria that allow for the rebuttal of the state's presumptive guidelines. The state-determined criteria must take into consideration the best interest of the child.

Federal regulation requires states to review their child support guidelines at least once every four years [45 C.F.R. § 302.56]. The current federal requirements of state guidelines formula

are nominal. They must be based on specific descriptive and numeric criteria, take all earnings and income of the noncustodial parent into consideration, and address how the parents will provide for the child(ren)'s healthcare needs through health insurance coverage and/or through cash medical support. In November 2014, the federal Office of Child Support Enforcement (OCSE) proposed changes to the federal requirements of state guidelines.⁷ They are shown in strike-out version in Exhibit 1. There have been over 2,000 comments on the proposed rule changes, so it may take some time for finalized rules to be developed and released. Nonetheless, the existing Vermont guidelines appear to be in compliance with the proposed rule changes.

Exhibit 1: Redline/Strikeout of Proposed Changes to Federal Requirements of in State Guidelines for Setting Child Support Awards

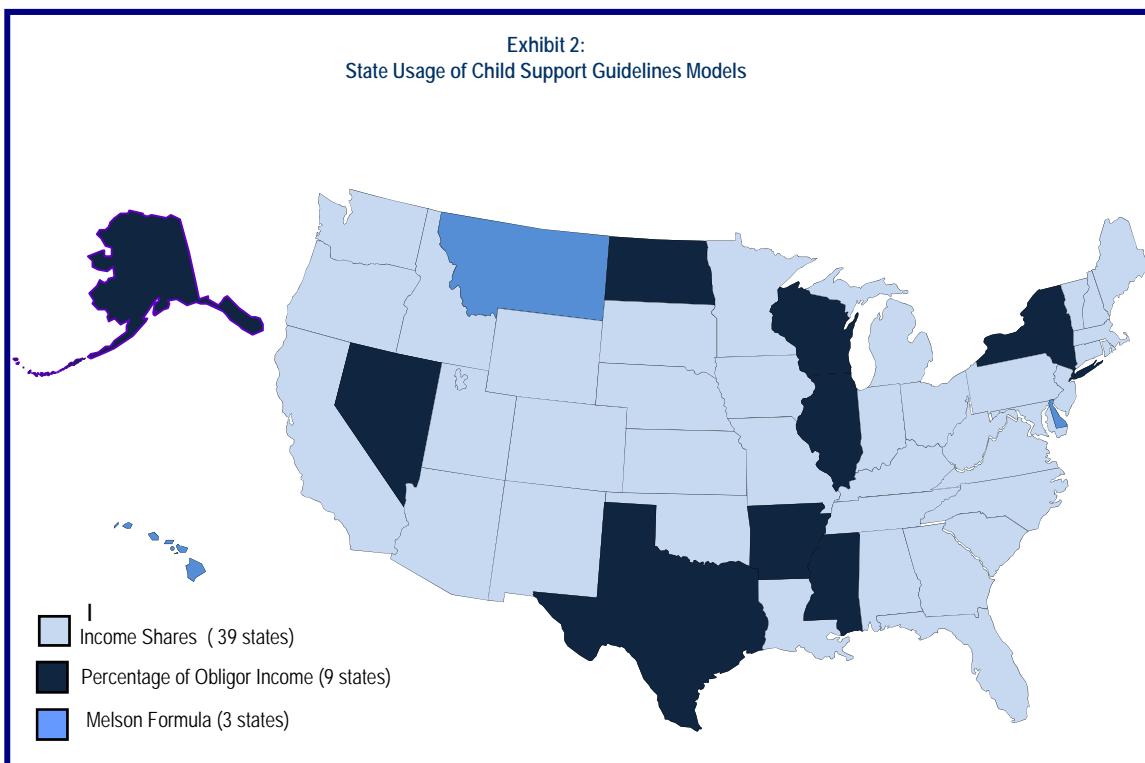

45 C.F.R. § 302.56

- (a) Effective October 13, 1989, Within one year after completion of the State's next quadrennial review of its guidelines, pursuant to § 302.56(e), as a condition of approval of its State plan, the State must establish one set of guidelines by law or by judicial or administrative action for setting and modifying child support award amounts within the State that meet the requirements in this section.
- (b) The State must have procedures for making the guidelines available to all persons in the State whose duty it is to set child support award amounts.
- (c) The guidelines established under paragraph (a) of this section must at a minimum:
- (1) Take into consideration ~~all the actual~~ earnings and income of the noncustodial parent;
 - (2) Be based on specific descriptive and numeric criteria and result in a computation of the support obligation;
 - (3) Address how the parents will provide for the child(ren)'s health care needs through health insurance coverage and/or through cash medical support in accordance with § 303.31 of this chapter;
 - (4) Take into consideration the noncustodial parent's subsistence needs and provide that any amount ordered for support be based upon available data related to the parent's actual earning, income, assets, or other evidence of ability to pay, such as testimony that income or assets are not consistent with a noncustodial parent's current standard of living; and
 - (5) Provide that incarceration may not be treated as voluntary unemployment in establishing or modifying support orders.
- (d) The State must include a copy of the guidelines in its State plan.
- (e) The State must review, and revise, if appropriate, the guidelines established under paragraph (a) of this section at least once every four years to ensure that their application results in the determination of appropriate child support award amounts.
- (f) Effective October 13, 1989, The State must provide that there will shall be a rebuttable presumption, in any judicial or administrative proceeding for the award of child support, that the amount of the award which would result from the application of guidelines established under paragraph (a) of this section is the correct amount of child support to be awarded.
- (g) A written finding or specific finding on the record of a judicial or administrative proceeding for the award of child support that the application of the guidelines established under paragraph (a) of this section would be unjust or inappropriate in a particular case will be sufficient to rebut the presumption in that case, as determined under criteria established by the State. Such criteria must take into consideration the best interests of the child. Findings that rebut the guidelines shall state the amount of support that would have been required under the guidelines and include a justification of why the order varies from the guidelines.
- (h) Child support awards established under paragraph (a) of this section may recognize parenting time provisions pursuant to State child support guidelines or when both parents have agreed to the parenting time provisions.
- (i) As part of the review of a State's guidelines required under paragraph (e) of this section, a State must consider economic data on the cost of raising children and analyze case data, gathered through sampling or other methods, on the application of, and deviations from, the guidelines. The analysis of the data must be used in the State's review of the guidelines to ensure that deviations from the guidelines are limited. Deviation from the presumptive child support amount may be based on factors established by the State.

GUIDELINES MODELS AND STATE USAGE

As shown in Exhibit 2, 39 states including Vermont base their guidelines on the Income Shares model, which was developed through the 1984-87 National Child Support Guidelines Project.⁸ The project was convened at the request of Congress and tasked with making recommendations to states to help them develop statewide guidelines. At the time, few states had statewide guidelines.

The income shares model was developed to embody the principles of state child support guidelines identified by the Guidelines Project's Advisory Panel. Among other things, these principles state that parents should share in the financial support of their children, the guidelines should not assume whether the mother or father is the custodial parent, It also incorporates economic data on actual child-rearing expenditures. The income shares guidelines model is based on the premise that the child should be entitled to the same level of expenditures that the child would have received had the parents lived together and combined financial resources. As a consequence, the core of the income shares model is a measurement of how much families spend on child rearing. In turn, that amount is often adjusted in a guidelines worksheet for different situations such as the child's actual healthcare expenses and other factors.

⁸ National Center for State Courts (1987). *Development of Guidelines for Child Support Orders, Final Report*. Report to U.S. Department of Health and Human Services, Office of Child Support Enforcement, Williamsburg, Virginia.

The premise of the income shares model applies to children of previously married parents as well as never-married parents. Children should not be forced to live in poverty because of their parents' decisions to separate, divorce, or not marry. Children of disrupted families, regardless of the reason for the disruption, should be afforded the same financial opportunities as children of intact families with similar incomes. Another major premise of the income shares model is that both parents are financially responsible for their children. To this end, the average amount expended on children is prorated between the parents. The obligated parent's share becomes the basis of the child support award. There may be other adjustments for physical custody or other factors.

Other guidelines models used by states include the Melson formula and the percentage-of-obligor income model. The percentage-of-obligor income guidelines model simply assigns a flat or sliding-scale percentage of obligor income to support. It does not consider the obligee's income in the calculation. Most percentage-of-obligor income guidelines also relate to measurements of child-rearing expenditures in intact families like the income shares model does. The difference, however, is that the income shares model presumes that both parents are financially responsible for those expenditures and each parent's responsibility is his or her prorated share.

Used by Delaware, Hawaii, and Montana, the Melson formula is named after a Delaware judge. It first considers the basic needs of the children and each parent. If the obligated parent's income is more than sufficient to cover his or her share of the basic needs of the children and his or her basic needs, an additional percentage of that parent's remaining income is assigned to child support. This additional percentage ensures that the children share in the standard of living afforded by the obligated parent.

Other State Guidelines Differences

States using the same guidelines model rarely yield similar amounts for the same case circumstances.⁹ This is because state guidelines use different studies of child-rearing measurements as the base of their schedules, price levels and tax rates from different years, and different state tax rates. State guidelines also vary considerably in their assumptions and treatment of the child's time with each parent, adjustments for low-income parents, and other factors.

One of the major reasons that state guidelines amounts differ is that they rely on different economic studies of child-rearing expenditures as the bases of their tables or formulas. These studies differ in age and methodologies used to measure child-rearing expenditures, particularly age. Several states have not updated their core tables or formulas for several years. Chapter II provides more details about differences in economic methodologies.

⁹ Jane C. Venohr (2013) "Child Support Guidelines and Guidelines Reviews: State Differences and Common Issues," *Family Law Quarterly*, vol. 43, no. 3 (Fall 2013).

Other factors exacerbate differences among states using the same economic study as the basis of their guidelines. States using the same economic study may differ because of differences in price levels in the years that the states updated their schedules. For example, one state may have updated a particular study to 2010 price levels and another state using the same study may have updated it to 2012 price levels. A few states incorporate standard time-sharing adjustments into their core formula, so this causes differences from states that do not. Similarly, many states incorporate a low-income adjustment into their core table/formula, which cause large variations in state guidelines at very low incomes.

ORGANIZATION OF REPORT

This report is organized into four chapters.

Chapter I provides an introduction and background information. Much of the background information is unchanged since the last time Vermont reviewed its guidelines. Readers seeking more detailed background information are encouraged to read the report for the last guidelines review.

Chapter II reviews current measurements of child-rearing expenditures.

Chapter III describes the steps and key assumptions taken to arrive at updated child support tables.

Chapter IV compares the existing and updated tables using case scenarios and concludes the report.

Side-by-side comparisons of the existing and updated tables are provided in the appendices.

Chapter II: Economic Cost of Child Rearing

There are several studies measuring the cost of raising children. Most state guidelines rely on studies of child-rearing expenditures across a range of incomes rather than studies that examine the minimum and basic needs of children. This is because the premise of most state guidelines is that children should share in the lifestyle afforded by their parents. The studies typically develop measurements from examining expenditures data from thousands of families participating in the Consumer Expenditure Survey (CES), the nation's largest and most comprehensive survey of household expenditures. Nonetheless, the studies of child-rearing expenditures vary in the age of the data used, the methodology used to separate the child's share of expenditures from total household expenditures, and other data or methodological issues.

Economists do not agree on which methodology best measures actual child-rearing expenditures. Nonetheless, economists generally agree on which methodologies understate and overstate actual child-rearing expenditures. It is widely accepted that any guidelines amount between the lower and upper bounds of credible measurements of child-rearing expenditures are appropriate guidelines amounts. In general, guidelines amounts below the lower bound are deemed to be inadequate for the support of children.

Through a contract with the U.S. Department of Health and Human Services, Lewin/ICF (1990)¹⁰ developed this approach of comparing state guidelines amounts to the lower and upper bound of credible studies of child-rearing expenditures. Since then, several states have used this approach and continue to use it. The most commonly used methodology, the "Rothbarth" methodology, is generally considered the lower bound in the range of available estimates. The Betson-Rothbarth (BR) measurements form the basis of 30 state guidelines including Vermont's Guideline Table. Professor Betson, University of Notre Dame, developed his first study of child-rearing expenditures in 1990 and has updated his study thrice. His most recent study (2010) forms the basis of the existing Vermont child support schedule.¹¹ It has not been updated.

The most current study considered for the upper bound is conducted by the United States Department of Agriculture (USDA). Minnesota is the only state to use the USDA study as the basis of its guidelines. With the exception of New Jersey, which is discussed in more

¹⁰ Lewin/ICF. (1990). *Estimates of Expenditures on Children and Child Support Guidelines*. Report to U.S. Department of Health and Human Services, Office of the Assistant Secretary for Planning and Evaluation. Fairfax, Virginia.

¹¹ Betson, David M. (2010). "Appendix A: Parental Expenditures on Children." in Judicial Council of California, *Review of Statewide Uniform Child Support Guideline*. San Francisco, California. Retrieved from: <http://www.courts.ca.gov/partners/documents/2011SRI6aGuidelineReview.pdf>

detail later, most of the states that do not rely on BR measurements for their guidelines rely on very old studies of child-rearing expenditures dating back to the 1980s.¹²

STUDIES OF CHILD-REARING EXPENDITURES

Since 2011, when the Vermont Guideline Table was developed, there have been two new, credible studies of child-rearing expenditures.

- New Jersey Child Support Institute (March 2013). *Quadrennial Review: Final Report, Institute for Families*, Rutgers, the State University of New Jersey, New Brunswick, NJ. Retrieved from: http://www.judiciary.state.nj.us/reports2013/F0_NJ+QuadrennialReview-Final_3.22.13_complete.pdf

Overview of the Betson-Rothbarth Measurements

In the past two decades, Professor Betson, University of Notre Dame, has conducted four studies estimating child-rearing expenditures. The existing Vermont table is based on his fourth study. Each study uses expenditures data from the most current Consumer Expenditure Survey (CES) data available. For Betson's first study, he used CES data from 1980-86.¹³ For his second study, he initially used from 1996-98 CES data, but later expanded it to encompass 1996-99.¹⁴ For his third¹⁵ and fourth study, respectively, he used data from the 1998-2004 and 2004-09 CES.

Some of his studies use other methodologies besides the Rothbarth methodology to measure child-rearing expenditures. Betson's first study was conducted in 1990 and responded to a Congressional mandate to develop information about child-rearing expenditures for states to develop and revise child support guidelines. For this study, he used and compared five different methodologies for measuring child-rearing expenditures and concluded that the

¹² Over a dozen of states base their guidelines on the following two studies: Jacques van der Gaag (1981). *On Measuring the Cost of Children*. Discussion Paper 663-81. University of Wisconsin Institute for Research on Poverty, Madison, Wisconsin, and Thomas J. Espenshade. (1984). *Investing in Children: New Estimates of Parental Expenditures*, Urban Institute Press: Washington, D.C.

¹³ David M. Betson (1990). *Alternative Estimates of the Cost of Children from the 1980-86 Consumer Expenditure Survey*, Report to U.S. Department of Health and Human Services, Office of the Assistant Secretary for Planning and Evaluation, University of Wisconsin Institute for Research on Poverty, Madison, Wisconsin.

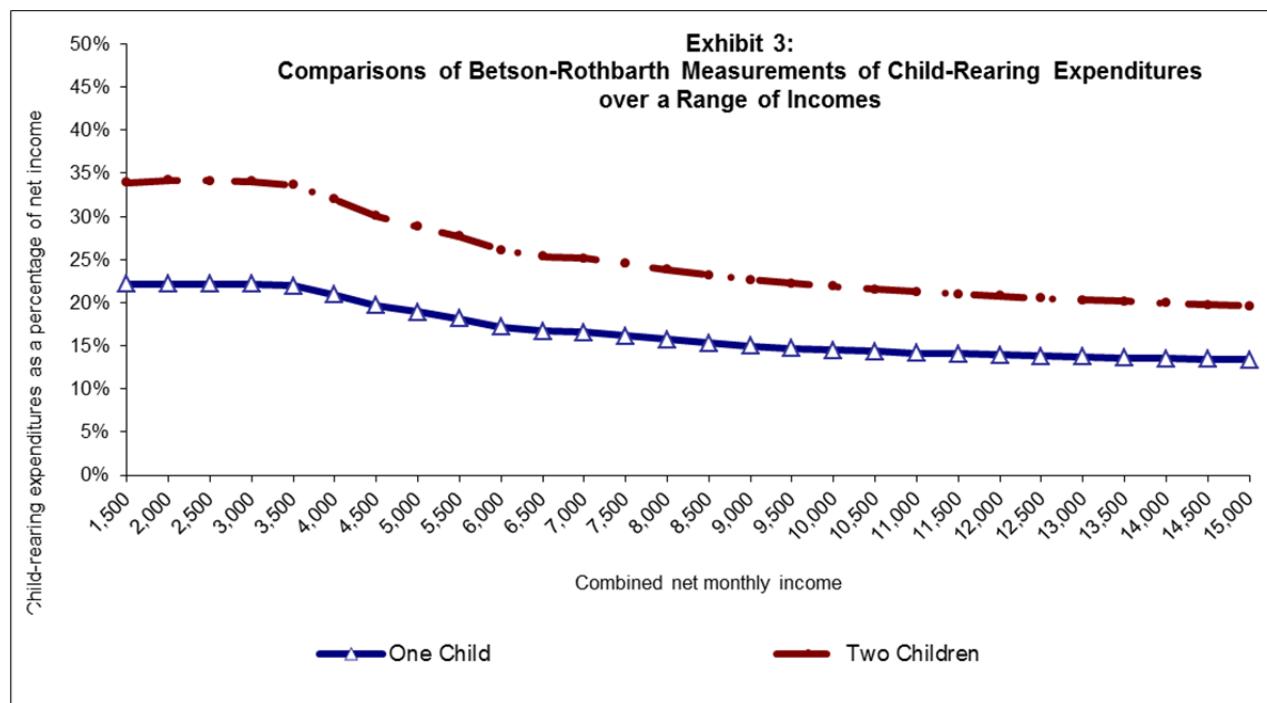

¹⁴ David M. Betson (2001). "Chapter 5: Parental Expenditures on Children," in Judicial Council of California, *Review of Statewide Uniform Child Support Guidelines*, San Francisco, California.

¹⁵ David M. Betson (2006). "Appendix I: New Estimates of Child-Rearing Costs" in PSI, *State of Oregon Child Support Guidelines Review: Updated Obligation Scales and Other Considerations*, Report to State of Oregon, Policy Studies Inc., Denver, Colorado.

Rothbarth estimator produced the most “robust” (*i.e.*, sound and statistically reliable) results and recommended its use for state guidelines.

The Rothbarth methodology is a marginal cost approach that compares expenditures of two sets of equally well-off households: one set consists of two-parent families with children and the other consists of couples without children. The difference in their expenditures is presumed to be spent on child rearing. The Rothbarth methodology relies on the percentage of total expenditures devoted to adult goods (*i.e.*, adult clothing in Betson’s application) to determine equally well-off families.

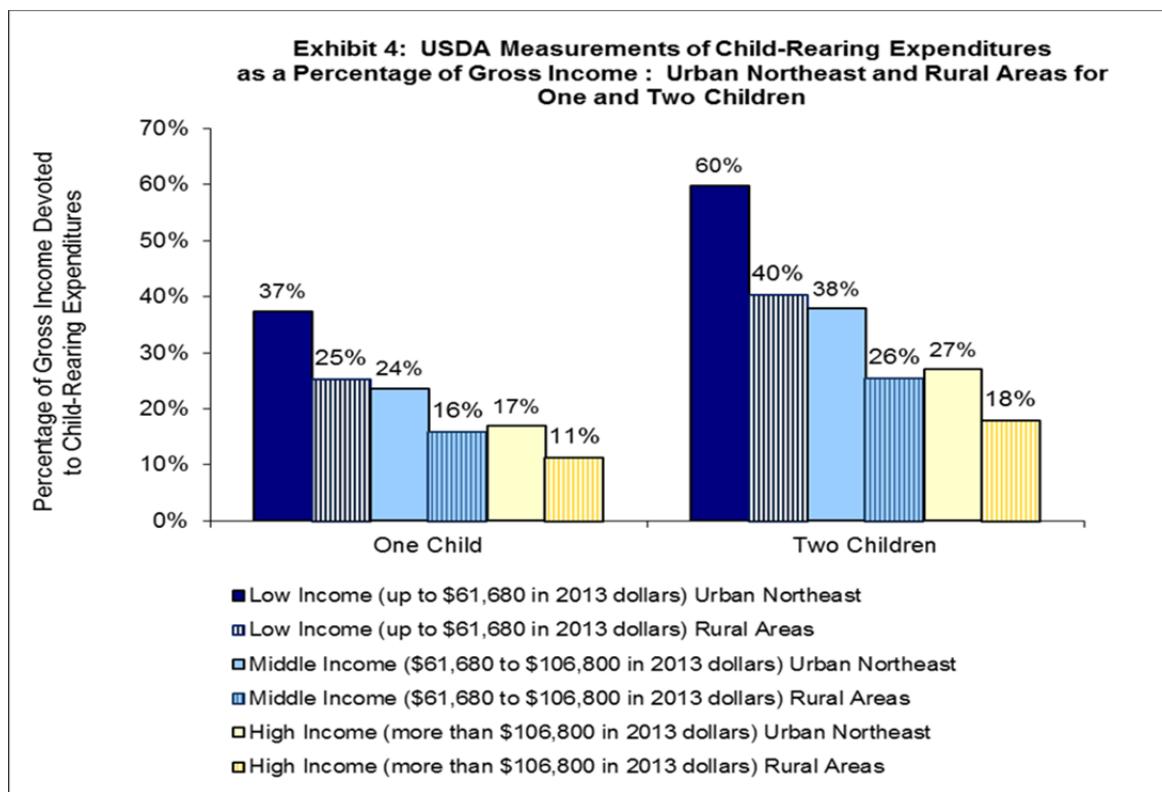

BR4 measurements found that, on average, families devote the following percentages of total expenditures to child rearing: 27 percent for one child, 37 percent for two children, and 45 percent for four children. When converted to a percentage of net or gross income, the percentages decline with more income. This is because higher income families generally do not spend all of their income and face a higher effective tax rates. Exhibit 3 illustrates this trend by showing the percentage of net income devoted to child-rearing expenditures for one and two children for a range of income.

Six states (*i.e.*, Colorado, North Carolina, Rhode Island, Vermont, Virginia, and Wyoming) rely on the most recent Betson-Rothbarth (BR4) measurements. Fifteen states rely on BR3 measurements and nine states rely on older BR measurements.

USDA Study

Another credible study of child-rearing expenditures is the United States Department of Agriculture (USDA) study, which is updated annually. The USDA estimates child-rearing expenditures individually for several expenditure categories (e.g., food, transportation, housing), then adds them to develop a total. Only one state (Minnesota) relies on the USDA measurements as the basis of its child support guidelines. The USDA study is considered the upper bound of current measurements of child-rearing expenditures. The most recent USDA study (2013) found that average child-rearing expenses are \$983 to \$2,106 per month for the youngest child in a two-child family in the Urban Northeast depending on family income and child age.¹⁶ The comparable amount in rural areas is \$674 to \$1,426 per month.¹⁷ (According to the 2010 Census, 61.1 percent of Vermont's population lived in rural areas.¹⁸) The USDA finds that higher income families and families with more children spend more dollars on child rearing. Exhibit 4 converts the USDA measurements to a percentage of gross income and compares them for one and two children at low, middle, and high incomes. Like the BR measurements, it suggests that higher income families devote a smaller percentage of their income to child-rearing expenditures.

¹⁶ Computed by assuming 18 years of child rearing (age 0 through 17) and converting to a monthly amount. (Lino, Mark (2014). *Expenditures on Children by Families: 2013 Annual Report*. U.S. Department of Agriculture, page 27.)

¹⁷ Computed by assuming 18 years of child rearing (age 0 through 17) and converting to a monthly amount. (Lino, Mark (2014). *Expenditures on Children by Families: 2013 Annual Report*. U.S. Department of Agriculture, page 31.)

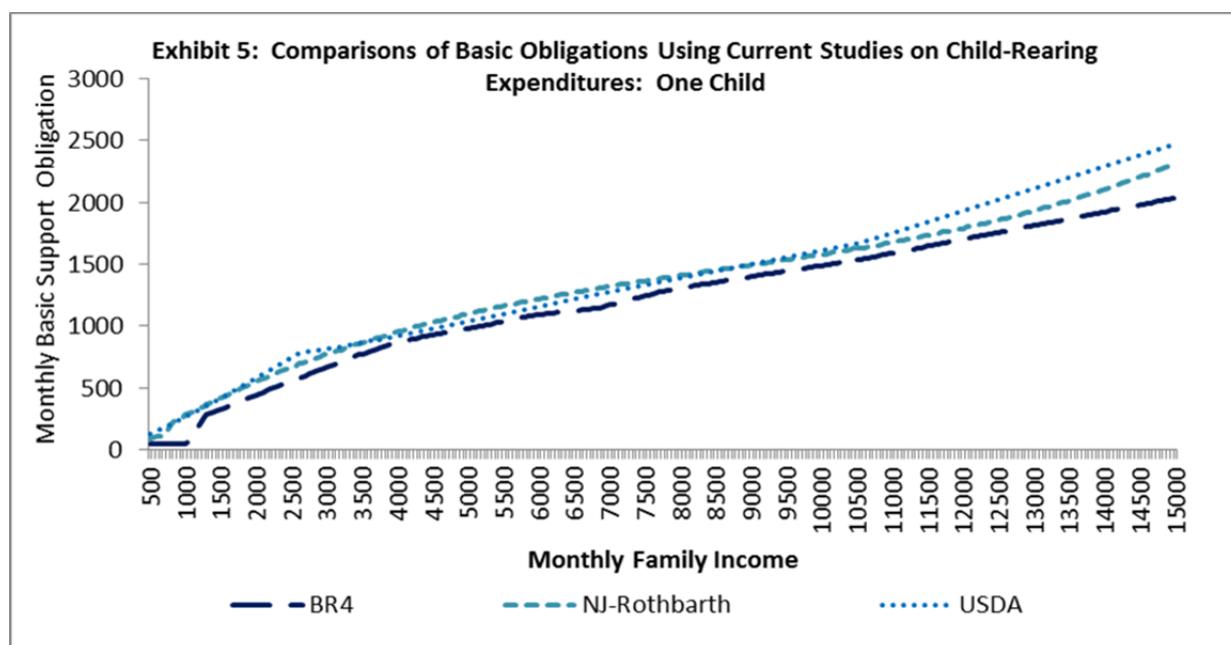

¹⁸ Wickenheiser, Matt. (March 26, 2012). "Census: Maine most rural state in 2010 as urban centers grow nationwide." *Bangor Daily News*. Retrieved from: <http://bangordailynews.com/2012/03/26/business/census-maine-most-rural-state-in-2010-as-urban-centers-grow-nationwide/>.

New Jersey Study

In 2013, New Jersey updated its guidelines using a study that was conducted by a Rutgers University professor applying the Rothbart methodology. However, it produced very different results from the Betson studies. The Rutgers study finds that two children do not cost much more than one child (*i.e.*, the amount allocated for two children is about 10 percent more than the amount allocated for one child based on the New Jersey study).¹⁹ The Rutgers study considers expenditures data from a larger time period (2000 – 2011), made an adjustment to reflect New Jersey's higher incomes, and also considers single-parent families and families with more than two adults living in the household while the BR studies consider dual-parent families only.

Comparisons

Exhibits 5, 6 and 7 compare the BR4 measurements to the USDA measurements and the New Jersey measurements for one, two and three children. National and individual state data find that the vast majority of orders cover one and two children. The BR4 shown in these exhibits also includes an ability to pay calculation that makes the BR4 measurement appear less than the other measurements at very low income.

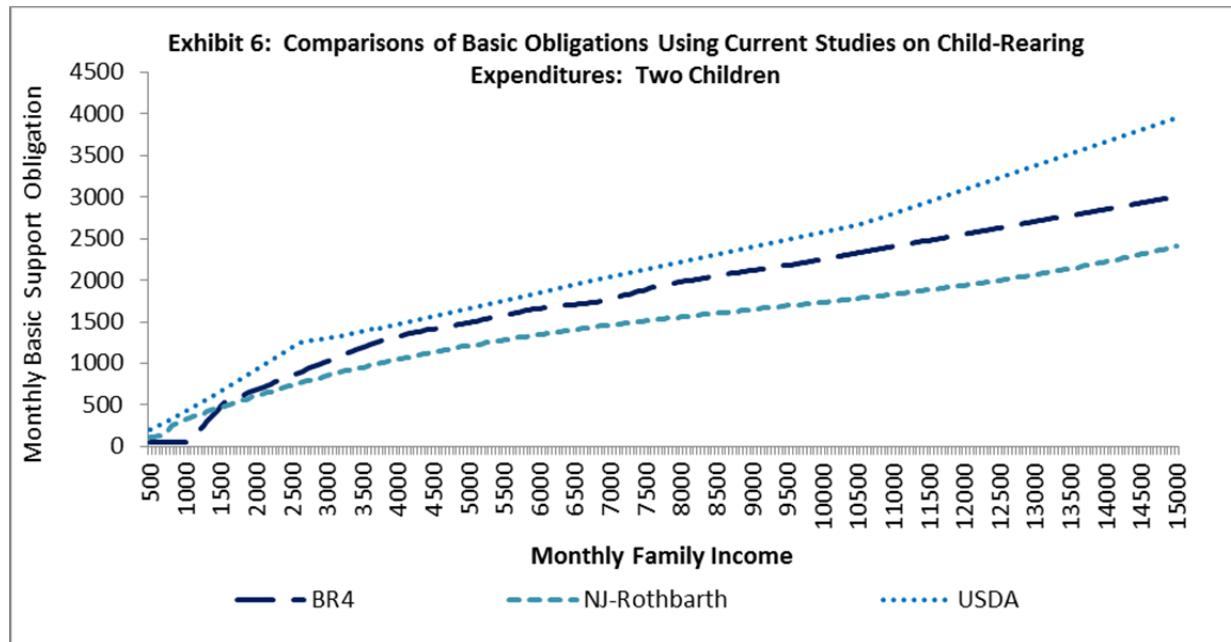

In general, the exhibits illustrate that the USDA is generally the upper bound of credible measurements of child-rearing expenditures regardless of the number of children, although this trend is more pronounced for two and more children than it is for one child. Exhibit 5, which considers one child, illustrates that the BR4 measurement is the lower bound.

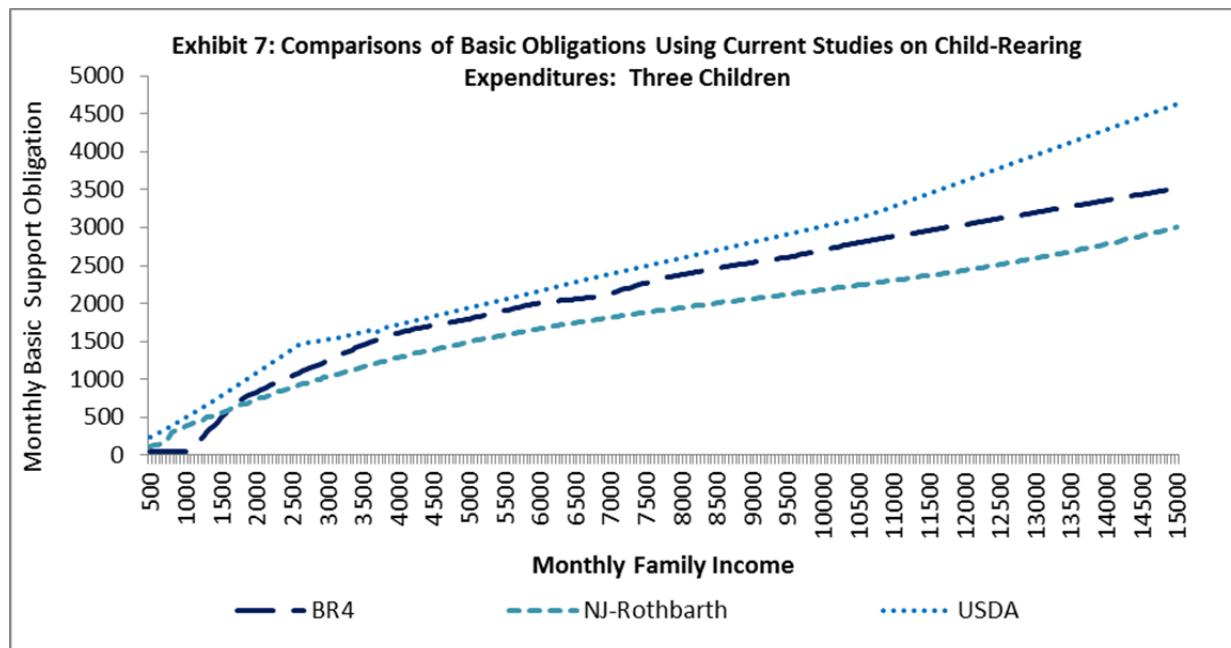

Comparisons of the New Jersey measurement, which is also calculated using the Rothbart

¹⁹ Jane C. Venohr (2013) "Child Support Guidelines and Guidelines Reviews: State Differences and Common Issues," *Family Law Quarterly*, vol. 43, no. 3 (Fall 2013).

methodology, illustrate the anomaly of the New Jersey measurement identified earlier; that is, the amounts for two children are not that much different than the amounts for one child and the amounts for three children are not that much different than the amounts for two children.

The patterns for four and more children are generally the same as those for three children.

DATA SOURCE OF THE ESTIMATES

All of the economists of the studies cited above estimated child-rearing expenditures from the Consumers Expenditures Survey (CES) that is administered by the Bureau of Labor Statistics (BLS). Economists use the CES because it is the most comprehensive and detailed survey conducted on household expenditures and consists of a large sample. The CES surveys about 6,000 households per quarter on expenditures, income, and household characteristics (*e.g.*, family size). Households remain in the survey for five consecutive quarters, with households rotating in and out each quarter. Most economists use at least three quarters or a year of expenditures data for a surveyed family. This means that family expenditures are averaged for about a year rather than over a quarter, which may not be as reflective of typical family expenditures.

The BLS designed the CES to produce a nationally representative sample and samples representative of the four regions (Midwest, Northeast, South, and West). The sample sizes for each state, however, are not large enough to estimate child-rearing costs for families within a state. We know of no state that has seriously contemplated conducting a survey similar to the CES at a state level. The costs and time requirements would be prohibitive.

Specific Consumption Items

The CES asks households about expenditures on over a hundred detailed items. Exhibit 8 shows the major categories of expenditures captured by the CES. It includes the purchase price and sales tax on all goods purchased within the survey period. In recent years, the CES has added another measure of “expenditures” called “outlays.” The BR4 measurements are calculated using outlays and the earlier BR measurements are calculated using expenditures. The key difference is that outlays essentially include installment plans on purchases, payments on mortgage principal and home equity loans, while expenditures do not.

Exhibit 8: Partial List of Expenditure Items Considered in the BLS, the Data Source Used to Estimate Child-Rearing Expenditures	
Housing	Rent paid for dwellings, rent received as pay, parking fees, maintenance, and other expenses for rented dwellings; and interest on mortgages, interest on home equity loans and lines of credit, property taxes and insurance, refinancing and prepayment charges, ground rent, expenses for property management and security, homeowners' insurance, fire insurance and extended coverage, expenses for repairs and maintenance contracted out, and expenses of materials for owner-performed repairs and maintenance for dwellings used or maintained by the consumer unit. Also includes utilities, cleaning supplies, household textiles, furniture, major and small appliances and other miscellaneous household equipment (tools, plants, decorative items).
Food	Food at home purchased at grocery or other food stores, as well as meals, including tips, purchased away from home (<i>e.g.</i> , full-service and fast-food restaurant, vending machines).
Transportation	Vehicle finance charges, gasoline and motor oil, maintenance and repairs, vehicle insurance, public transportation, leases, parking fees, and other transportation expenditures.
Entertainment	Admission to sporting events, movies, concerts, health clubs, recreational lessons, television, radio & sound equipment, pets, toys, hobbies, and other entertainment equipment and services.
Apparel	Apparel, footwear, uniforms, diapers, alterations and repairs, dry cleaning, sent-out laundry, watches, and jewelry.
Other	Personal care products, reading materials, education fees, banking fees, interest paid on lines of credit, & other expenses.

The merit of using expenditures, which does not include mortgage principal payments, is that any equity in the home should be considered part of the property settlement and not part of the child support payments. The limitations are not all families have substantial equity in their homes and some families have second mortgages or home equity loans that further reduce home equity. The merit of using outlays is that it is more in line with family budgeting on a monthly basis in that it considers the entire mortgage payment including the amounts paid toward both interest and principal, and the amount paid toward a second mortgage or home equity loan if there is such a payment. Both measures include payment of the mortgage interest, rent among households dwelling in apartments, utilities, property taxes, and other housing expenses as indicated in the above table. As shown in Exhibit 9, housing-related items comprise the largest share of total family expenditures. Housing expenses compose about 40 percent of total family expenditures.²⁰

Exhibit 9: Composition of Average Spending by Families (adopted from Betson 2010)				
Expenditure Category	Childless Couple	One Child	Two Children	Three or More Children
Total Annual Outlays	\$51,428	\$55,968	\$59,096	\$49,491
Budget Share (Percentage of Total Outlays)				
Food	15.7%	16.0%	16.8%	18.3%
Housing	37.9%	41.2%	41.4%	40.9%
Apparel	2.6%	3.1%	3.2%	3.6%
Transportation	20.3%	19.9%	19.0%	18.4%
Entertainment	7.2%	6.4%	6.8%	6.3%
Healthcare	6.1%	5.3%	5.3%	4.6%
Personnel Care	.7%	.6%	.6%	.5%
Education and Reading	1.9%	1.8%	1.7%	1.7%
Miscellaneous	7.6%	5.7%	5.2%	5.7%

Also shown in Exhibit 9, transportation expenses account for about one-fifth of total family expenditures. In the category of “transportation,” the CES includes net vehicle outlays, vehicle finance charges, gasoline and motor oil, maintenance and repairs, vehicle insurance, public transportation expenses, and vehicle rentals, leases, licenses, and other charges. The net vehicle outlay is the purchase price of a vehicle less the trade-in value. Net vehicle outlays account for about 36 percent of all transportation expenses and six percent of total household expenditures among families with children in the CES.²¹ Net vehicle outlays are an important consideration when measuring child-rearing expenditures because the family’s use of the vehicle is often longer than the survey period.

Other Data Considerations

Betson also excludes other expenditure items captured by the CES because they are obviously not child-rearing expenses. Specifically, he excludes contributions by family members to Social Security and private pension plans, and cash contributions made to

²⁰ Mortgage principal payments comprise about 5 percent of gross income among two-parent families with children less than 18 years old. Calculated from BLS, Table 5. *Composition of consumer unit: Average annual expenditures and characteristics, Consumer Expenditure Survey, 2013.*

²¹ Bureau of Labor Statistics, Table 5: *Composition of consumer unit: Average annual expenditures and characteristics, Consumer Expenditures Survey 2012.*

members outside the surveyed household. The USDA also excludes these expenses from its estimates of child-rearing expenditures.

Net Income

Gross and net incomes are reported by families participating in the CES. The difference between gross and net income is taxes. In fact, the CES uses the terms “income before taxes” and “income after taxes” instead of gross and net income. Income before taxes is the total money earnings and selected money receipt. It includes wages and salary, self-employment income, Social Security benefits, pensions income, rental income, unemployment compensation, workers’ compensation, veterans’ benefits, public assistance, and other sources of income. Income and taxes are based on self-reports and not checked against actual records.

The BLS has concerns that income may be underreported in the CES. Although underreporting of income is a problem inherent to surveys, the BLS is particularly concerned because expenditures exceed income among low-income households participating in the CES. The BLS does not know whether the cause is underreporting of income or that low-income households are actually spending more than their incomes because of an unemployment spell, the primary earner is a student, or the household is otherwise withdrawing from its savings. In an effort to improve income information, the BLS added and revised income questions in 2001. The new questions impute income when households do not report income. The 2010 Betson-Rothbarth measurements rely on these new questions. Previous Betson measurements do not.

The Relationship of Expenditures to Income

The BLS also does not include changes in net assets or liabilities as income or expenditures. In all, the BLS makes it clear that reconciling differences between income and expenditures, nor precisely measuring income, are not part of the core mission of the CES. Rather, the core mission is to measure and track expenditures. The BLS recognizes that at some low-income levels, the CES shows that total expenditures exceed after-tax incomes, and at very high incomes, the CES shows total expenditures are considerably less than after-tax incomes. However, the new income questions used by the BLS ameliorate some of this perceived anomaly at low incomes. The consideration of outlays rather than expenditures at high incomes lessens some of the perceived anomaly at high incomes.

In developing child support tables, a long-standing assumption has been that at higher incomes the difference between after-tax income and expenditures is a form of “savings.” This includes traditional savings (*i.e.*, deposits into a bank account) and other contributions to family wealth such as mortgage principal payments, which are included in CES measurement of expenditures but not in the CES measurement of outlays. For example, according to the most recent CES, high-income households (*i.e.*, households with incomes

over \$150,000 per year), the ratio of expenditures to after-tax income is 53 percent.²² This suggests a considerable amount of “savings.”

A high level of “savings” seems to contradict reports about the national savings rate being low. However, economists calculate the national savings rate using a different methodology.²³ Some of the differences concern the treatment of housing and medical expenses. When calculating the national savings rate, economists define savings to be the difference between disposable income and consumption. In defining consumption, economists impute the rental value of housing to homeowners even though the rental value may exceed the mortgage payment. Similarly, economists impute the value of all medical services received even though there was insurance coverage and the family incurred no out-of-pocket expense. These imputed values increase consumption considerably and hence, reduce the national savings rate. In fact, the escalating cost of health services contributes significantly to the declining national savings rate.²⁴

²² Calculated from BLS, *Table 2301. Higher income before taxes: Average annual expenditures and characteristics, Consumer Expenditure Survey, 2013*. Downloaded on June 25, 2014 from <http://www.bls.gov/cex/tables.htm>.

²³ More information about this difference can be found in California’s guidelines review report (Judicial Council, 2006).

²⁴ *Ibid.*

Chapter III: Steps and Assumptions Used to Develop Updated Tables

There are no new Betson-Rothbarth (BR) measurements available for updating the schedule. However, the Guideline Table is updated to current price levels, and the Tax Conversion Tables are updated for current federal and state income tax rates and FICA. There are two new credible studies of child-rearing expenditures, but neither are appropriate for Vermont without a thorough review of major assumptions. As illustrated in Exhibits 5, 6 and 7, switching to the USDA measurements of child-rearing expenditures would produce dramatic increases. The New Jersey study, which considers New Jersey incomes, is not appropriate for Vermont.

The economic data and assumptions underlying the updated tables are summarized below, while more extensive details are provided later.

- The updated Guideline Table is based on Betson-Rothbarth (BR4) measurements of child-rearing expenditures developed from the 2004-2009 Consumer Expenditure Survey (CES).
- The updated Guideline Table reflects December 2014 price levels.
- The existing and updated Guideline Tables do not include childcare, the cost of the child's health insurance premium, and any out-of-pocket expenses for the child's healthcare. The guidelines calculation considers the actual amounts expended for these items on a case-by-case basis.
- The existing and updated Guideline Tables are based on the average of **all** expenditures on children from ages 0 through 17 years. There is no adjustment for the child's age.²⁵
- The existing and updated Guideline Tables do not factor in an adjustment for the obligor's direct expenditures on the child during periods of split and shared custody. The guidelines provide additional steps for calculating the support award when there is split or shared custody, including a separate worksheet calculation for shared custody.
- The updated tax conversion tables consider 2015 federal and state income taxes and FICA.²⁶

²⁵The economic evidence on whether one age group is more expensive than another age group is mixed.

²⁶There is one exception, which is the federal earned income tax credit because the formula for 2015 has not been made available yet. Instead, the 2014 formula is used.

The major data changes are price levels and tax rates. Price levels have increased 7.7 percent since the existing Guideline Table was developed. Most of the tax changes consist of inflationary increases to deductions and exemptions and tax bracket increases and increases to the earned income tax credit. The only tax rate changes since the last guidelines review are the rise of the top federal tax rate to 39.6 percent, and the 0.9 percent additional Medicare tax for wages in excess of \$200,000 per year.

UPDATED GUIDELINE TABLE

Exhibit 10 shows the updated Guideline Table.

The table is based on the same data and technical steps as the existing table except for the update of the table to December 2014 price levels. The technical steps are the same as those used to develop the existing guideline table.²⁷ They are summarized below.

Step 1: Convert to current price levels

Dr. Betson developed his new estimates based on April 2010 price levels. They are updated to December 2014 price levels using changes in the Consumer Price Index developed by the U.S. Bureau of Labor Statistics.

²⁷ See Venohr, Jane. (February 28, 2011). *Economic Basis of Updated Child Support Tables for Vermont*, Submitted to the Office of Child Support, Department for Children and Families, Vermont Agency of Human Services. Center for Policy Research, Denver, CO.

Step 2: Subtract selected expenses

The studies measuring child-rearing expenditures include all expenditures on the children, including work-related child care expenses, the cost of the child's health insurance benefit, and the child's uninsured, medical expenses. In contrast, most income shares guidelines, including the existing Vermont guidelines, consider the actual amount of these expenses on a case-by-case basis when calculating the support award. Since the actual amounts are considered, they are not included in the guideline table. Including them in both the guideline table and worksheet would result in double-accounting of those expenses.

Betson provided supplemental information in order to subtract these expenses from his total estimates of child-rearing expenditures for the purposes of developing a guideline table. Using the same subset of the CES that he used to measure child-rearing expenditures, he measured the percentage of total expenditures devoted to child care expenses; the percentage of total expenditures devoted to uninsured healthcare expenses, including the cost of the child's health insurance benefits; and expenditures to net income ratios.

Step 3: Extend the estimates to four and more children

Betson's estimates only cover one, two, and three children, yet the guideline table covers up to six children. The number of families in the CES with four or more children is insufficient to produce reliable estimates. For both the existing and updated guideline table, the National Research Council (NRC)'s equivalence scale, as shown below, is used to extend the three-child estimate to four and more children.²⁸

$$= (\text{Number of adults} + 0.7 \times \text{number of children})^{0.7}$$

Step 4: Back out estimates to net income

The Betson-Rothbarth (BR) estimates of child-rearing expenditures are expressed as a percentage of total family expenditures. Some families have savings and do not spend all of their after-tax income on their family. Most income shares tables, including the existing Vermont table, consider the expenditures to consumption ratios observed among the same sample of families in the CES used to calculate child-rearing expenditures. These ratios are multiplied by the BR measurements to arrive at a percentage of total family after-tax income expended on children.

Step 5: Calculate marginal percentages

The application of the previous steps yields percentages of net income attributable to child-rearing expenditures for one to six children that do not include child care expenses, health insurance premiums, or uninsured, extraordinary medical expenses for several income ranges. To gradually phase between income ranges, most income shares guidelines use marginal percentages that are developed by taking the ratio of (a) the difference in the base support amount between one income bracket and the next bracket and (b) the difference in the monthly net income between the same income brackets. In turn, basic obligations are

²⁸ Citro, Constance F. and Robert T. Michael, Editors (1995). *Measuring Poverty: A New Approach*. National Academy Press. Washington, D.C.

calculated by applying the percentage of net income attributable to child-rearing expenditures to the midpoint of each income range.

Step 6: Extrapolate estimates to higher incomes

The Betson measurements of child-rearing expenditures used to develop the updated guideline table were only estimated for families with combined net incomes up to about \$16,393 per month. There were an insufficient number of families with higher incomes to produce measurements at higher incomes. The updated guideline table is extended assuming families with net incomes between \$16,393 and \$25,000 per month spend at the same rate as families with net incomes at \$16,393 per month. This was the same assumption used to develop the existing guideline table except the income threshold was slightly less. As a consequence, the amounts above about \$17,000 net per month are unchanged.

UPDATED TAX CONVERSION TABLES

Exhibits 11 and 12 are updated tax conversion tables for sole and split custody, and shared custody, respectively. The updates consist of the following assumptions.

Taxable Income

Each parent's taxable income is based on the standard deduction and number of exemptions prescribed in Vermont statute (15 V.S.A. § 653). These amounts are provided in IRS 2015 Form 1040-ES. They are used to calculate both federal and state taxable income. The standard deduction is \$6,300 per year for single tax filers, which is the tax status to be used for the non-custodial parent in sole custody cases, and \$9,250 per year for head of households, which is the tax status to be used for the custodial parent in sole custody cases and either parent in shared custody cases. The personal exemption is \$4,000 per year. According to Vermont statute (15 V.S.A. § 653), each parent can claim himself or herself as an exemption and the custodial parent in sole custody cases can also claim the exemptions for the number of children for whom support is being determined while in shared custody cases, the exemptions for the children for whom support is being determined are split equally between the parents.

Federal and State Tax Rates

2015 federal tax rate schedules published in IRS Form 1040-ES are applied to taxable income as determined above. Similarly, 2015 state tax rate schedules published by the Vermont Department of Taxes (i.e., the 2015 Vermont Withholding Tables: Effective Date: January 1, 2015) are applied to taxable income as determined above.

FICA

FICA consists of a 6.2 percent social security tax and a 1.45 percent Medicare tax. The employee tax rate for social security of 6.2 percent is applied to gross incomes of up to \$118,500 per year. The wage base limit is published in IRS Publication 15 (Circular E), Employer's Tax Guide for 2015. In addition, the Medicare tax of 1.45 percent is applied.

There is also a 0.9 percent additional Medicare tax for wages in excess of \$200,000 per year. There is no wage base limit on the Medicare tax.

Child Tax Credit and EITC

Because the EITC and the child tax credit are not advanced, they are computed from the IRS 2014 1040 Instructions. 2015 instructions for the EITC are not yet available, but there is a small increase in the 2015 EITC (*e.g.*, from \$6,143 per year for three or more qualifying children to \$6,242 per year). The income at which the maximum amount will be applied and the gradual phase-in and phase-out of the EITC amounts for 2015 are not available yet, so the 2014 amounts are used. The child tax credit will not change from 2014 to 2015. The federal child tax also considers IRS Publication 972 (Child Tax Credit) and IRS Form 8812 (Additional Child Tax Credit). The EITC includes a no-child EITC for qualifying noncustodial parents. The Vermont Earned Income Credit of 32 percent of the federal earned income tax credit is also applied. In the tax conversion tables for sole custody, the custodial parent receives the child tax credit and EITC for the number of children for whom support is being determined. The tax conversion tables for shared custody are somewhat more complicated because IRS rules preclude the splitting of the EITC but allow divorced or separated parents to split the child exemptions. As a consequence, the tax conversion tables for shared custody consider the entire EITC for the number of children for whom support is being determined and the child tax credit for only half of the number of children for whom support is being determined. For example, the tax conversion tables under shared custody for two children would consider the EITC for two children but the child tax credit for only one child.

Chapter IV: Comparisons and Conclusions

The major purpose of this report is to provide updated Vermont Child Support Tables using the most current economic data available and without major methodological changes. This limits the update to changes in price levels and federal and state tax rates since the existing tables were developed in 2011. Specifically, there are three tables that are updated in this report.

- The Tax Conversion Table for Sole and Split Custody Cases
- The Tax Conversion Table for Shared Custody Cases
- The Table of Intact Family Expenditures (Guideline Table)

Side-by-side comparisons of the existing to proposed amounts for each of these tables are provided in Appendix A, Appendix B, and Appendix C, respectively.

The remainder of this chapter highlights some of the differences among the existing and proposed amounts as well as the factors underlying those differences. This is followed by case comparisons of the existing to proposed guidelines amounts. The comparisons include guidelines amounts from bordering states.

PROPOSED CHANGES TO THE TAX CONVERSION TABLES

The proposed changes to the tax conversion tables reflect changes from the 2011 to 2015 federal and state income tax rates and FICA. As previously mentioned, the major tax changes are an increase of the highest federal income tax bracket to 39.6 percent; an additional Medicare tax of 0.9 percent for incomes in excess of \$200,000 per year; inflationary changes to the standard deduction, exemption, and tax brackets; and increases to the maximum amount of the Earned Income Tax Credit (EITC) and the phase-in and phase-out of the EITC.

As shown in the side-by-side comparisons in Appendices A and B, the changes vary depending on the custody situation, number of children, and income range. The average change in after-tax income is one percent. For most situations, the increase is less than one percent. The minimum and maximum change is about four percent and typically occurs at gross incomes below \$4,000 per month. These changes typically reflect changes in the EITC amounts and interactions with other changes such as bracket increases. The federal EITC is generally less at very low incomes and more at the top income ranges to which the federal EITC applies. For example, a parent with one child who earned \$50 per month received an EITC equivalent to \$18 per month in 2011 would now receive a federal EITC equivalent to \$16 per month. The state EITC exacerbates these patterns because it is a percentage of the federal EITC.

Nonetheless, the maximum federal EITC has increased from: an equivalent of \$38 per month to \$41 per month for an individual not claiming a child as dependent, an equivalent

of \$254 per month to \$275 per month for an parent claiming one child as a dependent, an equivalent of \$420 per month to \$455 per month for a parent claiming two children as dependents, and an equivalent of \$472 per month to \$512 per month for a parent claiming three children or more as dependents. As clarification, the term, “equivalent” is used because the EITC is not advanced. For the purposes of the tax conversion, the annual amount is averaged across twelve months. The maximum federal EITC also applies to higher incomes and phases out at higher income than it did in 2011. Specifically, the maximum federal EITC for individuals with no dependents effectively applies up to incomes of \$650 per month, while the comparable income in 2011 was \$600 per month. For individual with no dependents, the federal EITC effectively phased-out when income exceeded \$1,100 per month in 2011 and now effectively phases-out when income exceeds \$1,200 per month. For parents claiming children as dependents, the highest income to which the maximum federal EITC applied in 2011 was \$1,400 per month and is now \$1,500 per month. In 2011, the federal EITC completely phased-out when the income of a parent reached \$2,950 per month for one child, \$3,400 per month for two children, and \$3,600 per month for three or more children. The comparable incomes in current dollars are \$3,200, \$3,600 and \$3,900 per month, respectively.

Another observable pattern change from 2011 to 2015 is in the range of about \$9,000 per month. It is due to the increase in the social security wage base limit from \$106,800 per year (\$8,900 per month) in 2011 to \$118,500 per year (\$9,875 per month) in 2015.

PROPOSED CHANGES TO THE GUIDELINE TABLE

The existing and proposed Guideline Tables are based on the most current Betson-Rothbarth (BR) measurements of child-rearing expenditures. The existing schedule reflects the most current price levels that were available when it was developed (December 2010) while the updated table reflects December 2014 price levels, which were the most currently available at the time this report was written. Price levels have increased 7.7 percent between these two time periods. The percentage change is not exactly 7.7 percent because it is assumed that income has also increased.²⁹

As discussed in Chapter II, the BR measurements are the most commonly used measurements by states. There has been no new BR study since Vermont last updated its Guideline Table. Two new, credible studies of child-rearing expenditures have been conducted since then but neither are appropriate for updating the Vermont Guideline Table. As discussed and shown in Chapter II, updating the Vermont Guideline Table using the USDA measurements of child-rearing expenditures would produce substantial increases, which do not seem appropriate since economists do not agree that the USDA measurement more accurately measures child-rearing expenditures than the BR measurement. Further, the

²⁹ The U.S. Bureau of Labor Statistics reports that the average hourly earnings of all private employees was \$22.77 in December 2010 and \$24.63 in December 2014 (*i.e.*, an 8.1 percent increase). Retrieved from: <http://data.bls.gov/pdq/SurveyOutputServlet>.

USDA measurements are the upper bound of credible measurements and used as the basis of only one state's guidelines. The other study was conducted for New Jersey and adjusted for New Jersey's median income, which is much higher than most states. Because New Jersey and Vermont are dissimilar, it would be inappropriate to apply New Jersey-adjusted measurements to Vermont.

As shown in Appendix C, none of the proposed changes exceed five percent. At very low incomes, there is \$0 change because the percentage change does not become apparent until the base amount is larger, which is the situation that occurs as income rises or the number of children increase. There are also \$0 changes at very high incomes (*i.e.*, after-tax incomes above \$16,393 per month) because, as explained in Chapter III, it is assumed that families with incomes above this threshold spend the same percentage of income as this income, which is the highest income for which the BR4 measurements are available.

CASE COMPARISONS

The range of income considers the median incomes of Vermont workers by their highest educational attainment and gender, as reported by the U.S. Census 2014 American Community Survey. It is assumed that the parents reach the same educational attainment. There are five levels of educational attainment considered:

- less than a high school degree³⁰
- high school graduate or GED³¹
- some college or associate's degree³²
- Bachelor's degree;³³ and
- Graduate or professional degree.³⁴

It is assumed that the custodial parent is the female and the noncustodial parent is the male³⁵ in the first three case scenarios, as shown in Exhibits 13, 14, and 15, which consider one, two and three children. There is no parenting time, childcare expenses, medical expenses or other factors in these case scenarios. The exhibits also compare guidelines amounts from bordering states. Maine is one of a few states to provide different amounts for younger and older children. The amount for older children is used for Maine in the comparisons.

The exhibits show negligible differences between the existing and proposed Vermont table amounts. For example, in the third scenario for one child under Exhibit 13, which is a case involving parents whose income reflects the median income of Vermont workers whose highest educational achievement is some college or technical school, the order amount for

³⁰\$24,397 per year for males and \$22,847 for females.

³¹\$32,413 per year for males and \$23,075 for females.

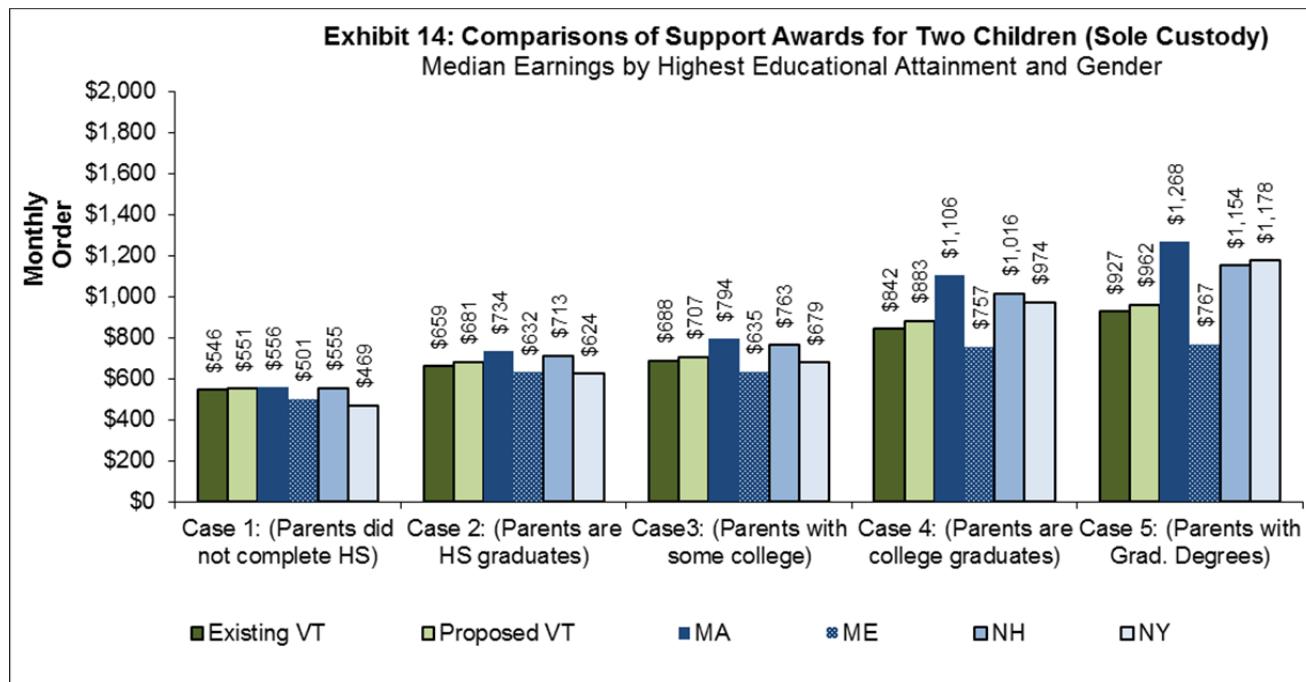

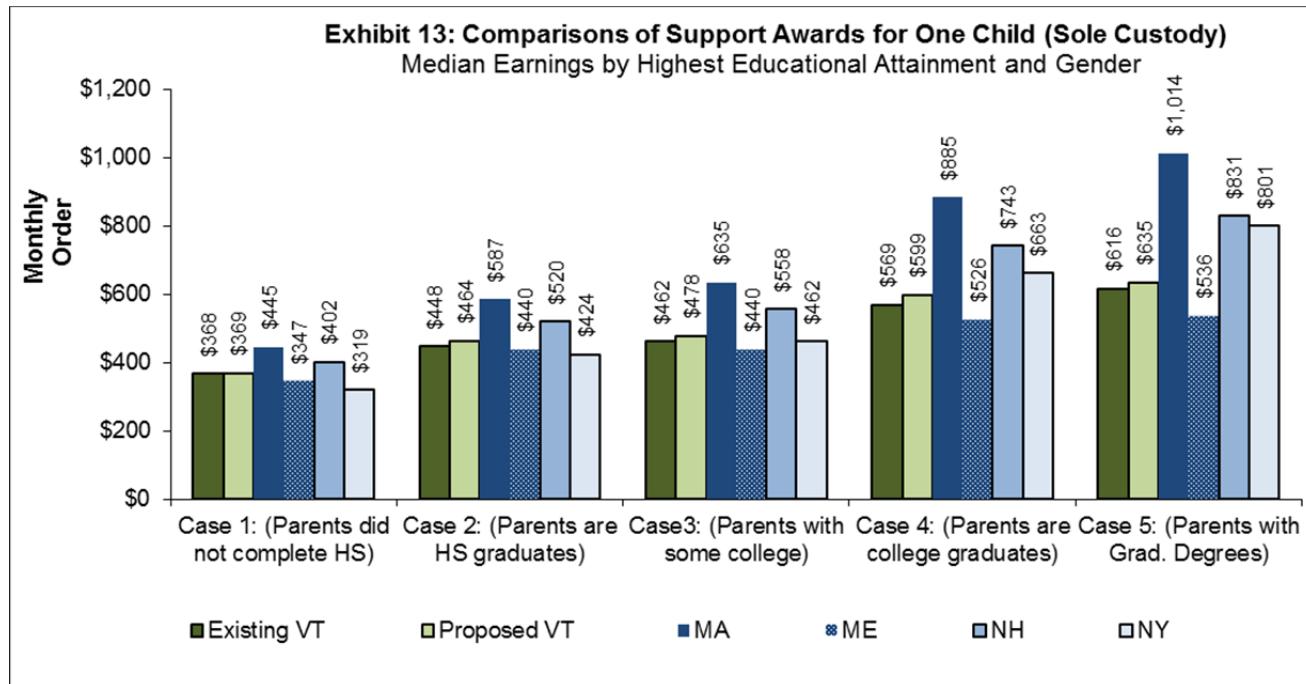

³²\$35,315 per year for males and \$28,245 for females.

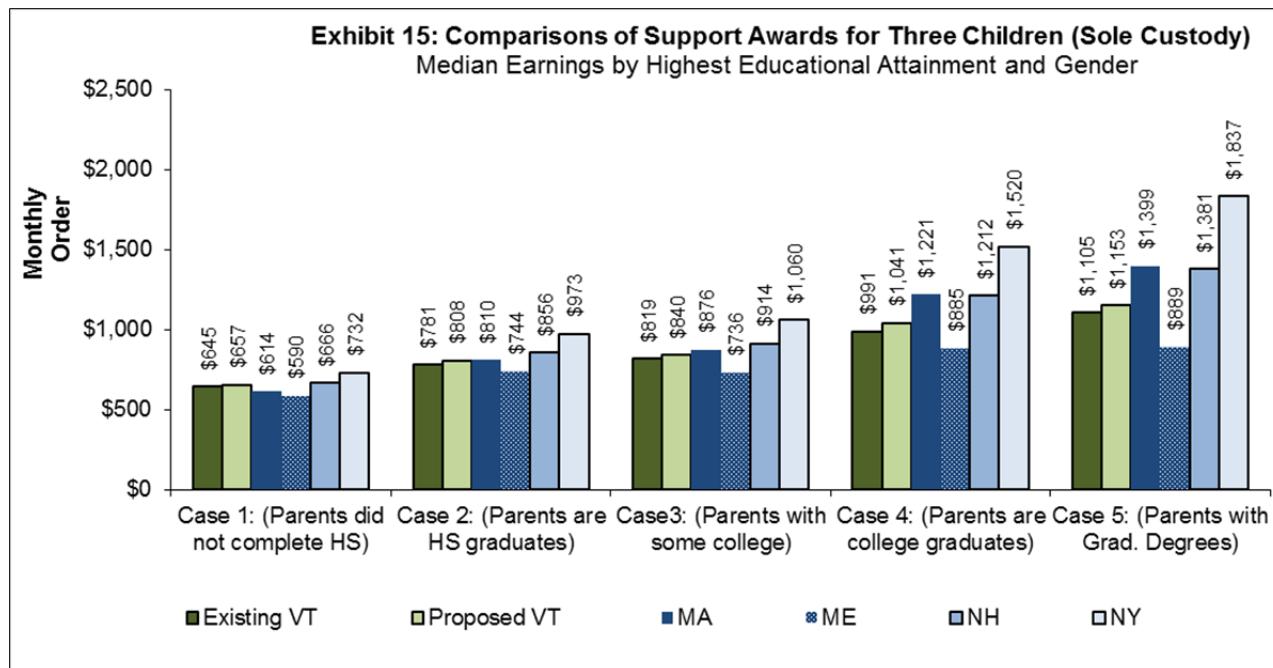

³³\$50,647 per year for males and \$35,627 for females.

³⁴\$61,202 per year for males and \$51,429 for females.

³⁵According to national data, over 80 percent of custodial parents are females.

under the existing guideline tables would be \$462 per month. It would increase to \$478 per month under the proposed tables. This is a \$16 per month increase.

The exhibits show that the Vermont guidelines is generally between the amounts of those of bordering states. Most of the states neighboring Vermont rely on versions of the income shares model. New York, however, applies a flat percentage of the adjusted gross income of the noncustodial parent to calculate its award amount. New York's flat percentage yields amounts in range to income shares states at low to middle incomes. At higher incomes, the New York flat percentages are generally much more than those than income shares states because most income shares states reflect actual patterns of child-rearing expenditures that find higher income families devote a smaller fraction of their income to child-rearing expenditures.

New Hampshire also used to be based on a flat percentage of income, but New Hampshire's flat percentage considered the net income of both parents when applying the flat percentage. Recently, New Hampshire reduced its percentages at higher incomes.³⁶ Massachusetts recently switched its guidelines approach to an income shares approach. Its guidelines amounts do not relate to one study of child-rearing expenditures.³⁷ This is why the Massachusetts amounts appear high relative to other states in the comparisons. In general, Massachusetts has one of the highest guidelines in the nation. Prior to the switch, Maine used a guidelines model that was essentially a percentage-of-obligor income until the

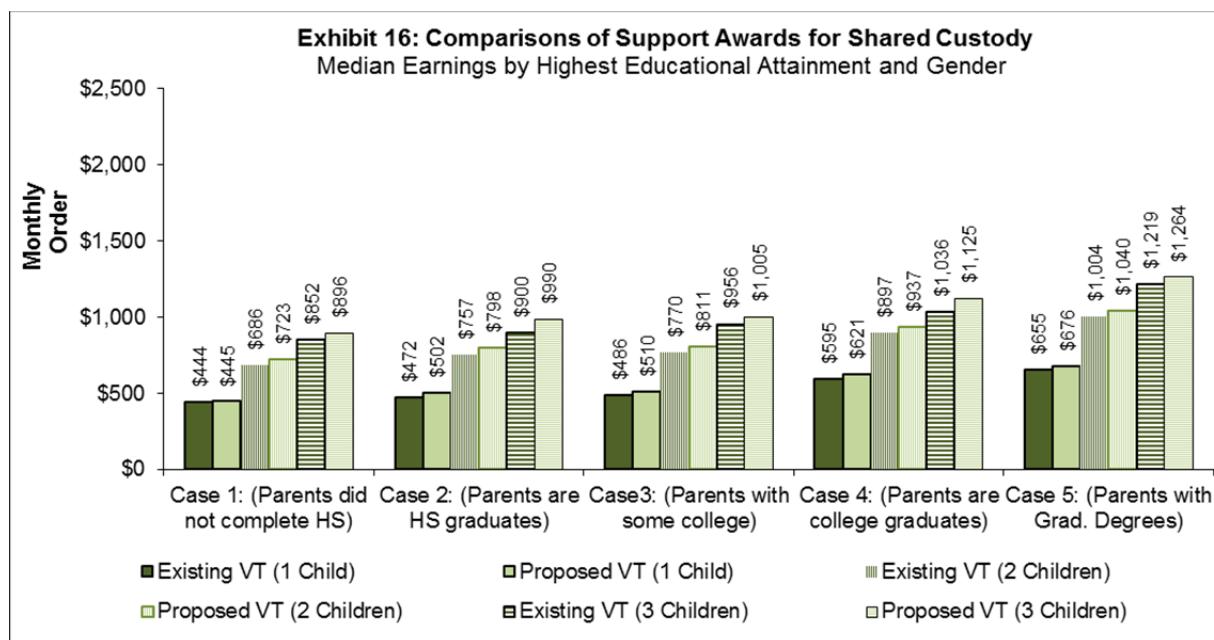

³⁶ Gordon, Christine. (Sept. 13, 2013). "Child support paid by high-income earners is recalculated." *New Hampshire Business Review*. Retrieved from: <http://www.nhbr.com/September-6-2013/Child-support-paid-by-high-income-earners-is-recalculated/>.

³⁷ As noted by the task force reviewing the Massachusetts guidelines, "The Chart [The Massachusetts Child Support Guidelines Chart] is not based on any one economic measurement of child-rearing expenditures." Massachusetts Child Support Guidelines 2012 Task Force. (2013). *Final Report of the Massachusetts Child Support Guidelines 2012 Task Force*. Office of the Trial Court, Boston, MA. P. 80. Retrieved from: <http://www.mass.gov/courts/docs/child-support/2012-task-force-report.pdf>.

custodial parent's income after payment of childcare expenses was substantially more than poverty. Maine guidelines are also based on older Betson-Rothbart measurements that were adjusted for Maine's lower incomes.

Similar differences between the Vermont existing and proposed tables exist for shared custody situations. This is illustrated in Exhibit 16, which consolidates the scenarios for one, two and three children in one graph. The comparisons consider the same income scenarios as those in Exhibits 13, 14, and 15. The only difference is it's a shared custody situation in which the parents share custody equally. In all of the scenarios, the male earnings are more than female earnings, so the father owes the mother support.

Unlike Vermont, most of the states bordering Vermont do not apply a guidelines formula for shared custody, rather most provide it is a deviation factor at court discretion. For this reason, other states are not included in the comparison scenarios involving shared custody.

CONCLUSION

This report essentially demonstrates that Vermont has fulfilled the federal requirement of states for a quadrennial review of its child support guidelines and a consideration of the economic cost of raising children. This report also provides updated child support tables based on current price levels and federal and state tax rates and FICA. The updated tables conform to state statutory requirements about the tax status of each parent. Updating the Vermont child support tables for these changes is appropriate and just.
